**Communicate data
—with confidence.**

Hi, I am Cédric Scherer

As an **independent data visualization specialist**, I assist organizations, research teams, and businesses in effectively communicating insights through engaging graphical storytelling.

I combine analytical research expertise with a passion for design, colors, and typography to craft compelling and meaningful data visualizations. Additionally, I also frequently engage as a speaker and workshop trainer.

How can I assist you?

- Data Visualization Design & Consultation
- Reproducible Data Science Workflows
- Tailored Trainings & Individual Coachings

Escalating Drought

Climate change is intensifying periods of extreme dryness, particularly in the U.S. West

For more than 20 years the National Drought Mitigation Center (NDMC) has been monitoring dozens of indices of drought around the country, including satellite measurements of evaporation and color in vegetation, soil-moisture sensors, rainfall estimates, and river and streamflow levels. Although the agency's weekly assessments have identified periods of exceptional drought before, lately dryness has been ramping up. "The changing climate is definitely contributing to more natural disasters, drought being one of them," says Brian Fuchs, a climatologist who oversees the weekly report at the NDMC. "We're seeing more frequent and high-intensity episodes. This year some of these areas in the West have been in drought more than they have been without drought."

Drought Extent and Intensity by Region over Time

California experienced its hottest drought in recorded history from 2012 to 2016. A warming climate makes the atmosphere thirstier, which increases evaporation and boosts drought.

A drought that originated in the Southern Plains in 2011 eventually spread to the Midwest and Northern Plains when the moisture coming in from the Gulf of Mexico was absorbed by the parched South before it could reach the North.

The Southeast's driest year to date was 2007, when only 31.85 inches of rain fell in Atlanta, 62 percent of its average yearly rainfall.
